

Project Nimbus Operations Runbook

Overview:

Project Nimbus is the internal billing reconciliation service. It was launched on 14 February 2025 and is owned by the Payments Platform team based in Singapore.

Key facts:

- The nightly reconciliation job runs at 02:30 UTC.
- The on-call rotation escalation contact is the Payments Platform lead.
- The service stores ledgers in a Postgres database named "nimbus_ledger".
- The maximum supported batch size is 50,000 transactions per run.

Recovery:

If the nightly job fails, re-run it manually with the command "nimbus reconcile --date <YYYY-MM-DD>". Always verify the ledger checksum afterwards.
